//Personal Secretary Data Assistance//

A biometric system can operate in the following two modes.In

verification mode the system performs a one-to-one comparison

of a captured biometric with a specific template stored in a

biometric database in order to verify the individual is the

person they claim to be. Three steps involved in person

verification. In the first step, reference models for all the

users are generated and stored in the model database. In the

second step, some samples are matched with reference models to

generate the genuine and impostor scores and calculate the

threshold. Third step is the testing step. This process may use

a smart card, username or ID number (e.g. PIN) to indicate which

template should be used for comparison.'Positive recognition'

is a common use of verification mode, "where the aim is to prevent

multiple people from using same identity".
